

Hand Sculpture Drawing Instructions

Step 1 - After completing the cardboard hand sculpture, you will need a 12" x 18" piece of good drawing paper.

Step 2 - Use the hand model to make **4 different drawings of the hand.** Experiment with different finger positions (school appropriate only). Rotate the hand to see different sides.

Show the constructions of the hand. Draw the pointed square shape for the palm, draw the half circle for the wrist, draw the individual sections for the fingers, draw the big shape for the thumb.

Pro Tip - When looking a foreshortened object like a bent finger, close one eye to reduce the stereoscopic flip-flop that can make it harder to see what you are drawing.
