Syllabus

Digital Art 1 - This is a survey course that will focus on the use of electronic media (Adobe Illustrator, Adobe Photoshop) to enhance traditional art techniques. Students will be working in a computer lab-based classroom as well as in a hands-on studio art classroom. The assignments will allow students to engage in project-based and small group learning. Our class will learn the tools for each of the computer programs, elements and principles of art, as well as best practices of graphic designers, and digital artists. My goal is to provide challenging assignments for students of any skill level. There are no prerequisites for this course and all skill levels will be welcome. This course is aligned with the Common Core State Standards for the visual arts. A full year of the Digital Art 1 course will satisfy your 10 credits toward your elective units, **or** technology units, **or** Visual and Performing Art (VAPA) units. Five credits for Fall / Five credits for Spring.

Students that are enrolled in Digital Art 1 are required to show effort to engage in applying the skills, techniques and knowledge provided in this course. Students will have many opportunities to demonstrate understanding via their art projects, learning activities, classroom critiques, writing assignments and one-on-one discussions with the teacher.

There are no fees for this course. Natomas Unified School District will supply all necessary materials for students to earn a grade. Students must be respectful of our classroom equipment and supplies. If there is excessive damage to our equipment or supplies, the privilege of using them may be taken away or a bill to replace broken materials will be submitted to the person who is responsible. Grades will not be entered until the fees are paid.

Grades – Student performance is evaluated based on effort, following directions, completing projects on time, originality, creativity, craftsmanship, attendance and attitude. Final grades will reflect growth or lack of growth in these areas.
